HATTIE E. PAIGE, Assistant.

HISTORY OF THE SCHOOL.

LEGISLATION.

Article VIII, Section 1, of the Constitution of Indiana declares that—

"Knowledge and learning generally diffused throughout a community being essential to the preservation of a free government, it shall be the duty of the General Assembly to encourage, by all suitable means, moral, intellectual, scientific and agricultural improvement, and to provide by law for a general and uniform system of common schools, wherein tuition shall be without charge, and equally open to all."

On the 20th of December, 1864, it was enacted by the General Assembly, "That there shall be established and maintained, as hereinafter provided, a State Normal School, the object of which shall be the preparation of teachers for teaching in the common schools of Indiana."

This act provided for the location and erection of a building, the appointment of a Board of Trustees, the admission of students, the organization of the school, and the annual appropriation of funds for tuition and expenses.

ORGANIZATION AND GROWTH.

On the 6th day of January, 1870, the school was opened with a faculty consisting of a President and four assistant teachers, and a group of twenty-one students, which increased to forty during the term. The following table exhibits the number enrolled during each term since the organization of the school:

| | | Enro | LLMENT. | rr. E | | f Dif- ls En- ear. | |
|-------|-----------------|-----------------|---------------|------------|----------------------------|---|--|
| YEAR. | Winter Term. | Spring Term. | Fall Term. | Total. | Average Term Enrollment | Whole No. of ferent Pupils rolled for Yea | |
| :870 | 40 | 66 | 36 | 142 | '47 | 98 | |
| 1871 | 33 85 | 84 | 76 | 193 | 64 | 141 | |
| 1872 | 85 | 131 | 96 | 312 | 104 | 224 | |
| 1873 | 106 | 197 | 125 | 428 | 143 | 286 | |
| 1874 | (74) | 279 | 143 121 | 496 | 165 162 | 304 322 | |
| 1876 | 146 118 | 218 183 | 103 | 485 404 | 135 | 282 | |
| 1877 | 120 | 246 | 171 | 537 | 179 | 329 | |
| 1878 | 187 | 413 | 216 | 816 | 979 | 592 | |

| 1885 | 320 | 583 | | 1000 | 451 | | |

PROGRAMMES OF STUDY COMPARED.

The programme of study at the organization of the school, the completion of which entitled the graduate to a diploma at the end of two years' successful teaching, was as follows:

PROGRAMME OF STUDIES, 1871.

| Ist Term. | Lectures on Principles of Morals. | Study of Words. | Arithmetie. | Grammar. | Geography. |
|--------------|---|-----------------------|-----------------------------|--------------------------------|--------------|
| zd Term. | Reading. | Orthography. | Arithmetic. | Grommar. | Geography. |
| 3d Term. | Reading. | Drawing and Geometry. | Arithmetic. | Grammar and Composition. | Geography. |
| Ath Term. | Ment, Science, (Lectures.) Reading. | U. S. History. | Arithmetic. | Grammar and Composition. | Geography. |
| Sth Term. | Ment. Science. | U. S. History. | History of Education. | Composition. | Physiology. |
| Gth Term. | Lectures on Organization and Classification of Schools. | Methods of In | struction and | Practice in Tra | ining School |

The following is the programme of studies of the English and Latin course at the present time, the completion of which entitles the graduate to a diploma after two years' successful experience in teaching:

PROGRAMME OF THE ENGLISH AND LATIN COURSE.

| Ist Term. | Observation in Training — Schools. | Reading. | Arithmetic | Gram- mar. | Penmanship, 16 Term, Orthography, 16 Term, A | |
|---------------|---|-------------------------------------|--|------------------------------|---|--------|
| 2nd Term. | Theory of the Common School. + | Reading. | Arithme- | Gram- mar. | Geography. | |
| 3d Term. | Method in Reading and Number. | Physiology. | Arithme- tic and Book- keeping. | Gram- mar. | Geography. | |

| 20th Term. | History of Education. | | Geometry. | Grad. Thesis. | Botany. | |

VOCATIONS REPRESENTED.

A record has been kept of the vocations of the parents of the students who have entered school, from which the following table has been constructed:

| Children of | farmers, | | | 3 | | | 2007 | + | 70 | per cent. |
|-------------|---------------|-------|-------|----|------|----|--------|---|----|-----------|
| Children of | mechanics, . | - | | | 400 | * | \$1754 | - | 10 | 41 |
| Children of | merchants, | 0.4 | | 4 | 6.0 | - | 4004 | 4 | 4 | 44 |
| | those practic | | | | | | | | | |
| Children of | laborers by | the c | lav o | rı | nonf | h. | 2000 | | 10 | 44 |

The average age of those who have attended during the past year is twenty years. This does not differ materially from the average of any preceding year.

Of the 704 different students who have attended during the past year, 289, or 41 per cent., were males, and 415, or 59 per cent., were females.

The number who have graduated from the school since its organization is 255; of this number, 173 are now teaching.

If from the number of graduates is deducted the number of ladies who have married, and left the profession for this reason, and also the number who have died, it is found that 90 per cent. of the remainder are now engaged in teaching. Of the entire 255 graduates in the past fourteen years, 3 per cent. have died, 7 per cent. are wives and mothers, 6 per cent. are living at home with their parents, 3 per cent. have entered some other vocation, unknown 5 per cent., 76 per cent. are now teaching.

We have no means of determining how many of the undergraduates, who number about 4,000, are now teaching in the State. The proportion is not so large as is that of graduates, for obvious reasons.

Eighty-three counties in the State have had representatives in the school during the past year, ending June 12, 1885, as follows: Allen, 3; Blackford, 2; Bartholomew, 3; Boone, 9; Benton, 12; Brown, 2; Cass, 8; Clinton, 12; Clay, 16; Clark, 6; Carroll, 4; Crawford, 1; Dearborn, 5; Dubois, 5; Decatur, 1; Daviess, 2; Delaware, 5; Dekalb, 3; Elkhart, 2; Floyd, 5; Fountain, 7; Fulton, 7; Fayette, 1; Franklin, 1; Gibson, 11; Greene, 4; Grant, 5; Howard, 19; Hamilton, 2; Hendricks, 24; Huntington, 8; Hancock, 2; Henry, 5; Harrison, 1; Jefferson, 9; Jackson, 7; Jasper, 5; Johnson, 1; Jennings, 2; Kosciusko, 7; Knox, 8; Laporte, 2; Lagrange, 2; Lawrence, 2; Marion, 10; Miami, 11; Morgan, 9; Montgomery, 10; Madison, 4; Martin, 4; Newton, 7; Noble, 1; Owen, 10; Ohio, 1; Orange, 2; Parke, 41; Porter, 1; Perry, 1; Posey, 4; Putnam, 11; Pike, 3; Rush, 4; Ripley, 2; Randolph, 4; Spencer, 13; Sullivan, 8; Shelby, 5; St. Joseph, 5; Switzerland, 7; Scott, 5; Tipton, 1; Tippecanoe, 14; Vigo, 172; Vermillion, 17; Vanderburg, 1; White, 6; Wayne, 11; Warren, 6; Warrick, 25; Wabash, 13; Washington, 1; Wells, 3.

The attendance from Vigo county is larger, as would be expected. This number, however, includes many who have removed to Terre Haute from other counties to have the advantage of the school.

THE IDEA OF THE SCHOOL.

The Normal School was established to prepare teachers for teaching in the common schools of the State.

What constitutes a preparation for teaching! The answer to this question will indicate the idea toward which the school has, been working since its organization.

1. The primary requirement is that the teacher have a thorough and accurate knowledge of the branches he is to teach.

There is a practical working knowledge of these common school branches that is possessed by all intelligent men and women. It is that common stock of knowledge upon which, as its foundation, the specific knowledge of every vocation rests. But the teacher's knowledge should be deeper and fuller than this. He must employ these branches as instrumentalities through which the pupil is to acquire not only information, but mental power as well. Mere knowledge or information is not power. It is possible that the process of acquiring this information may be so directed that powers may be engendered. But it is also possible for the mind to accumulate a large store of information without much increase of power. Whether the teacher shall be able to intelligently employ these instrumentalities so

that both knowledge and power shall be acquired by the pupil, will depend primarily upon the fullness of his own knowledge of them. This knowledge should include the principles active in each science and the laws of their activity in the construction of the science. In other words, the teacher should be able to create for himself the science from his knowledge of the facts, principles, and their laws that have been discovered by him. This complete scientific mastery of the common branches can not be made in our common schools for the reason that the pupils there are not mature enough to do the kind of work it demands; and it is not made in our colleges for the reason that the entire time of college students is devoted to the study of the higher branches of learning. But why does the teacher need this scientific knowledge, if his pupils will be able to gain only an elementary or working knowledge of the subjects? Because a complete knowledge of any subject is needful to the most successful teaching of any part or phase of it. Every science has its facts, its principles and their laws. The child must come to a knowledge of principles and laws through a knowledge of the facts. What facts shall be first taught, and in what order shall the succeeding facts follow? The teacher is unable to answer this question and know that he is right unless he knows the place of all the facts in the science. Without this knowledge he is ever attempting to teach facts which the child can not comprehend for the reason that they belong in a more advanced stage of knowledge of the subject.

Holding this to be true the school requires of its students such a knowledge of the common branches as will enable them to construct each science in outline, not from memory, but from a knowledge of the necessary relations of the ideas as they see them to exist.

2. The school, in the second place, seeks to continue the preparation necessary for teaching by a course of observation of good teaching in the training schools, which is followed by a period of practice in teaching in these schools. The student is required to observe the work of good teachers, and to study the same under the direction of the teacher of methods, until he has formed a standard of criticism, before he is permitted to practice

teaching. When a proper ideal of teaching has been formed, a comparatively short period of practice will give the necessary skill. The doctrine of "learning to do by doing" is sound, provided the learner has formed an approximately correct idea of the doing before he begins the practice.

Without a system of practice schools, in which the students were able to test their theories of teaching and modify them as experience might suggest, one important element in the education of teachers would be wanting.

3. The school seeks also to ground the students in the theory of teaching, since it holds that there can be no rational practice that is not based upon a rational theory. An extended study of the process of mental growth, and of the nature, conditions and products of the different mental faculties is made the foundation upon which a theory of teaching the different branches is constructed. A knowledge of the subjects to be taught and of the powers of the mind active in the different periods of its growth will enable the student, under the lead of an expert teacher, to determine both the matter that should be taught in each grade of school, and how this should be done. This theory is constantly tested and modified by the experience of the student in teaching in the different grades.

4. The school aims to instruct the students not only in the what, when and how to teach, but also in the why of teaching the different branches, and of pursuing the designated modes of school management.

Much stress is laid upon the importance of having a clear idea of the purpose of the common school, and of its relations to the family, the state and the business world.

COURSE OF INSTRUCTION.

There are three classes of students for whom instruction should be provided.

The first and largest class includes those who wish to prepare for teaching in the common schools in country, town or city, and who enter the Normal School having the minimum amount of scholarship, and but little of that mental discipline which results from a full and efficient course of school instruction. These must learn both the matter they are to teach, and the method of the acing it, in the Normal School. The school must afford them both academic and professional instruction.

Another class of students for whom provision is made is composed of those who have completed the course of study in our High Schools and Academies, and of those who may not possess the scholarship of the High School graduate, but who are teachers of age and experience, and because of their greater maturity are able to keep pace with these graduates.

The third class includes those who have graduated from the Colleges and Universities of the State, and who seek that professional training which shall fit them to assume the duties of superintendents and principals of High Schools.

The Normal School aims to give all of these instruction which shall secure the following results:

First. A thorough and scientific knowledge of the common school branches.

Second. A knowledge of mental science.

Third. A knowledge of methods of teaching the common school branches, determined (a) by the nature of the subject taught and the purpose for which it is taught, and (b) by the laws of mind active in the different stages of its growth. In other words, a knowledge of methods based upon a knowledge of mind, and a scientific knowledge of each subject taught in the schools.

Fourth. A knowledge of the actual school, gained by intelligent and systematic observation under the immediate direction of the teacher of methods, of the work done in the eight grades of the training school. Every exercise observed must be interpreted by the student.

Fifth. A knowledge of teaching in these grades, gained by the actual teaching of classes under criticism of the teacher of methods and of the critic teachers.

Sixth. A theoretical knowledge of school government and of the organization and classification of the schools, gained by a study of the application of the principles of psychology to these, and by the discussion of hypothetical cases.

Seventh. A praetical knowledge of school discipline, gained

(a) by being subject to school discipline as a student in the Normal School, and studying the subject from the standpoint of a pupil, and (b) by taking entire control of the discipline and instruction of one of the grades in the training schools for such time as is necessary to test the student's power to govern and teach a school.

Eighth. A knowledge of the legal relations and responsibilities of the teacher, gained by the study of the common school system and school law of the State.

Ninth. A knowledge of the philosophy and history of education, and of the great educational reformers.

Tenth. A knowledge of the mutual relations of superintendent, teacher and school officers.

Eleventh. The above is a general outline of the topics of study and instruction that are strictly professional, and that constitute the characteristic work of a normal school. An examination of the different courses of study which follow will show that, in addition to this, the school affords ample opportunity for a thorough academic training. By a recent action of the Board of Trustees, a supplementary course of instruction in the advanced branches of learning is provided, which will afford those who pursue it that fuller scholarship and broader culture necessary for the teachers of our best high schools.

PROGRAMMES OF STUDY.

The regular English course contains both a scholastic and a professional line of study. In scholarship it prepares the graduates to teach in any of the common schools of the State below the high school grade, and to teach the English subjects in any but the most advanced high schools. The professional line of studies in the course is as full as is given in any other course.

PROGRAMME OF REGULAR ENGLISH COURSE.

| Ist Term. | Observation in Training School. | Reading. | Arithmetic. | Grammar. | Penmanship ½ Term. Orthography ½ Term. |
|--------------|---|---|------------------------------------|--------------------------|---|
| ?d Term. | Theory of the Common School. | Reading. | Arithmetic. | Grammar. | Geography. |
| 3d Term. | Methods in Reading and Number, | Physiology. | Arithmetic and Book-keeping. | Grammar. | Geography. |
| 4th Term. | Mental Science. | U.S. History. | Algebra. | Composition. | Geography, Merm: Music, Music, |
| ith Term. | Mental Science. | U. S. History and Civil Government. | Algebra. | Music. | Drawing. |
| 6th Term. | Science of Teaching. | Methods in Geography, Grammar and Composition, | General History. | Rhetoric. | Physics. |
| 7th Term. | Practice in Training Schools. | | General History. | English Literature. | Chemistry. |
| 8th Term. | Organization and Classification of Schools and School Law. | Practice in Training Schools. | | Advanced Composition. | Astronomy or Geology, |
| 9th Term. | History of Education. | 5 | Geometry. | Graduating Thesis. | Botany. |

The programme of studies in the English and Latin course is given on page 10 of this report.

COLLEGE GRADUATE COURSE.

Graduates from the classical course of our Colleges and Universities, and those who have equivalent scholarship, will make a thorough review of the common school branches, and will make a professional study of the same, and complete all the work set forth above. Satisfactory evidence, in addition, that they have completed the course of study in the College, or that they have equivalent scholarship, will entitle them to a graduating certificate from the Normal School.

The instruction given embraces the following subjects:

First. A term's work (thirteen weeks, one hour per day) in each of the common school branches, viz.: Arithmetic, Grammar, Reading, Geography, and United States History. The purpose of this study is to lead the student to organize his knowledge of these subjects in accordance with the method which he shall discover to belong to each. This is for the purpose of giving him a clear view of the method of teaching each subject, in so far as such method is determined by the method that is in the subject itself.

Second. Educational Psychology for one term.

Third. The theory of methods to be employed in teaching Reading, Arithmetic, Geography, Grammar, and Composition. In this study the student is lead to discover the method of teaching by making a conscious application of the laws of mental activity and growth, to the method that has been found to exist in each subject.

Fourth. A study of the schools for practice for one term, in order to establish a standard of instruction and government.

Fifth. A study of the theory of the school, and the principles and rules of school government and instruction.

Sixth. Practice in teaching in the different grades of the training schools under the criticism of critic teachers and teachers of method, for two terms, until the student's power to instruct in every grade has been thoroughly tested.

Seventh. A study of the organization of courses of study, of the gradation of schools, of the legal relations of teachers and superintendents. Eighth. The History of Education.

This is a strictly professional line of studies, and is as different from the College curriculum as is the study of law or of medicine. The time is fast approaching when mere scholarship will not serve as a passport to lucrative positions. The demand for trained teachers is increasing each year. It is possible to obtain this training by practice in teaching, but when thus obtained it is at too great expense of time on the part of the teacher, and at too great cost to the children. A year's professional study will give the teacher a better preparation to solve the numerous complex and difficult problems that arise in school management than he will be able to gain in five years of practice. And until he can do this he is debarred from the better positions.

COURSE FOR GRADUATES OF HIGH SCHOOLS.

All graduates from commissioned high schools, by waich is meant high schools whose graduates are admitted to the Freshman Class of the Indiana University without examination, are admitted to this course upon presenting the diploma which would entitle them to admission to the University. Students in this course must complete all the professional work of the regular English course, and also the work of that course in the common school branches, including History and Composition. This work must all be done in the Institution. If they can pass a satisfactory examination in the other subjects of that course, they will not be required to study them in the school. If they possess the scholarship requisite for this upon entering, they can graduate in two years.

SPECIAL COURSE FOR HIGH SCHOOL GRADUATES,

(One Year.)

Many cities can not maintain a city training school for educating their own teachers. Only two cities in the State support such schools. The Normal School Board propose to organize a course of training for the graduates of high schools continuing through one year, which shall give such preparation for teaching in the primary and intermediate grades as can be made in so short a time.

It is the design to have this course in the State Normal School supply the place of training schools for those cities that do not have training schools of their own.

This will be a strictly professional course, in which a large portion of the time of the student will be spent in observation and teaching in the practice schools connected with the Institution. Those who complete this course will not be entitled to the diploma granted by the school.

The purpose of the course is to relieve the school officers of cities from the necessity they feel of employing, as teachers, the graduates of their high schools who have had no training in teaching. A year's training in the Normal School will add more to their efficiency as teachers than would several years' practice in teaching, and the schools will be supplied with a much better class of teachers. Whether this department will be organized or not will depend upon the demand for this kind of instruction. If twenty, five graduates of high schools shall apply for admission to this course a class will be formed.

ADVANCED COURSE OF STUDY.

Many who graduate from this school enter from the common schools, and receive their entire scholastic training here. The severe mental discipline, incident to the work required of them, makes them strong and methodical thinkers, and establishes habits of reflection and power of discrimination and judgment that enable them to discharge successfully the duties of superintendents or teachers of high schools, with the exception that the regular course does not afford a sufficiently extended scholarship for these higher positions.

To give this higher scholarship a post-graduate course of instruction has been provided as follows:

POST-GRADUATE COURSE.

(One Year.)

| Int Term | Latin or German. | Literature. | Algebra. | Physics. |
|----------|---------------------|--------------------------|---------------|---------------------------|
| 3d Term | Latin or German. | General History. | Geometry. | Chemistry or Astronomy |
| 3d Trrw | Latin or German. | Philosophy of Education. | Trigonometry. | Zoölogy or Geology. |

THE KINDERGARTEN.

A Kindergarten has been opened in connection with the Normal School. This is under the management of a graduate from one of the leading Kindergarten Training Schools of this country. It will be used as a school of observation by the students of the Normal School, and it is in the plan to have regular instructions in the theory and art of kindergarten training given to all the students at some stage of their course.

DEPARTMENTS.

Each department in the school is in charge of a specialist. These departments are as follows:

Department of Educational Science, in which the instruction that is characteristic of the school is given. This includes a study of Mental Science and of the Theory of Teaching, in which an investigation is made of methods of instruction adapted to the different studies, and to the different periods of mental growth. Besides the study of the Theory of Teaching, there is an almost continuous study and practice of the art of teaching from the time the student enters until he graduates. The training school is an essential part of a normal school. Without it the students can make no satisfactory attainments in the art of teaching. Is is in the training school that his theories are tested and his misconceptions corrected. It is here that he gains experience in teaching. The training

schools which form a part of the Normal School are a part of the public schools of the city of Terre Haute, and the instruction given in them is of the nature of that given in all the other schools of the city of like grade. The Normal students have, therefore, an opportunity to practice in an actual school, such as they will be called upon to teach after graduation. In addition to the lines of work above indicated, a study is made of the principles of school government, the educational values of studies, the proper succession of studies, the organization of courses of study, the gradation and classification of a school, the principles that should govern in the construction of a programme, and the like.

This line of pedagogical study extends throughout the entire course, from the first term to the last.

Department of English Language, which includes English Grammar, Composition, Reading, Rhetoric and Literature.

Department of Natural Science. The modern and improved methods of scientific teaching are employed by the teacher of this department. Some very valuable additions have been made to our apparatus during the past year.

Department of History.

Department of Geography.

Department of Mathematics.

Department of Ancient and Modern Languages.

Department of Art, including Music, Drawing, Penmanship and Elocution.

CONDITIONS OF ADMISSION.

Students, if females, must be sixteen years of age; if males, eighteen. They must possess good moral character and average intellectual ability. If residents of Indiana, they must promise to teach, if practicable, in the common schools of the State a period equal to twice that spent as pupils in the Normal School. They must pass a fair examination in reading, spelling, geography and arithmetic through percentage. They must write a legible hand, and be able to analyze and parse simple sentences.

SHORT COURSE.

The first three terms constitute a short course, which embraces all subjects required to be taught in the common schools, except History of the United States.

Members of this class can study United States History for a single term, if they so elect. Attendance for a year will afford opportunity for a thorough review of the common branches, and give a practical course of instruction in the theory and art of teaching.

RELATION TO THE STATE UNIVERSITY.

Graduates of the Indiana State Normal School who have completed the English and Latin course in that institution, may receive the degree of B. L. or B. S. from the Indiana University, on the completion of a special course of two years, supplementary to the course of the Normal School.

Graduates of the University may receive the diploma of the Normal School on the completion of a one year's course in that institution. This time is devoted entirely to professional study preparatory to teaching.

EXPENSES.

Board, including fuel and light, can be had in good families at \$3.00 to \$4.00 per week, according to the quality of accommodations. There are good facilities for self-boarding, and for club boarding in the city, at a cost of \$2.50 to \$3.00 per week. Nearly all the students board in clubs, thus reducing their entire expenses to \$2.50 per week for good accommodations. The expenses of many do not exceed \$2.00 per week.

WHAT TO DO ON ARRIVING.

Any one coming as a student, and unacquainted in the city, can report at the Normal building at any seasonable hour, where some one will be found to give needed information in regard to boarding. Students arriving by night trains will find suitable accommodations at the Terre Haute House and the National House, which are on the line of the street railroad.

BOOKS.

Students should bring with them such standard text-books as they have, for the purpose of reference. A good dictionary is indispensable.

LIBRARIES.

There are good reference libraries in the schools; also, a good general library of over two thousand volumes, to all of which students have access, without charge.

LOCATION OF THE SCHOOL.

Terre Haute is a flourishing city, containing more than 27,000 inhabitants. It is located on a beautiful prairie, and immediately upon the banks of the Wabash river. It is orderly and well governed, and is one of the most healthful cities in the State. The citizens are in hearty sympathy with the school, and are friends of the students. Society is of the best. Numerous literary and musical organizations afford opportunities for general culture, and the best lecturers and artists in the country visit Terre Haute.

ATTENTION.

is called to the following statements:

First. Tuition is free.

Second. The instruction is thorough and organic.

Third. The discipline is such as to lead the pupil to self-government and to the formation of a worthy character.

Fourth. Two good literary societies are in successful operation.

Fifth. Students are required to observe until they can accurately report and interpret the meaning of each exercise, and to practice teaching, under criticism, until they can plan and conduct recitations and manage classes efficiently.

Sixth. Capable undergraduates obtain good situations at good salaries.

Seventh. Graduates are commanding from \$50 to \$160 per month.

Eighth. The diploma of the Normal School is, by law of the State, equivalent to a State certificate, relieving the holder from county examinations.

Ninth. No student will be admitted to the Normal School, who does not intend, in good faith, to qualify himself or herself, to teach in the public schools of the State.

Tenth. It is important that every student expecting to attend the Normal School should be present the first day of the term, that all may be examined at once and classified. Those who enter a few days after the beginning of the term take, in their examination, the time of teachers which should be given to instruction. Besides, those who are tardy in entering find it difficult to "make up" lost lessons. Be present, ready for work, on the first day of the term.

Eleventh. Every student admitted will be required to give satisfactory evidence of good moral character, and of fair intellectual abilities. The personal appearance and conduct of the individual, together with a letter from some responsible citizen to whom the bearer is personally known, will be taken as evidence of character.

Twelfth. After reasonable trial, if a student shows lack of ability or application, or of moral character, to achieve fair success as a teacher, he or she will be advised to withdraw from the school and seek some other vocation.

Thirteenth, Those desiring other information respecting the Normal School, than that contained in this register, are requested to address State Normal School, Terre Haute, Indiana.

CALENDAR.

The fall term begins September 1, and ends November 27. The winter term begins December 1, and ends March 12. The spring term begins March 16, and ends June 11.

There will be a vacation during the holidays extending from December 18 to January 5.
